AO/ASIF Instruments and Implants (Rigger, Technoan, 2013) The original AO/ASIF Instrumentation manual presented a concise and complete description of all AO instruments. Thoughtfully developed by Fridolin Sequin and Rigmor Texhammar, the manual discusses in a clear format the purpose and care of the various AO instruments that are handled by the operating room staff. An important feature of the first edition was a detailed checklist of the instruments required for the most common operative procedures for treating fractures. Fridolin Sequin was well-suited to author the first edition: his 15 years of experience as a technical engineer for the AO and his 15 years of experience as a technical assistant for the AO gave him in-depth knowledge of the instruments, and he drew on the clinical knowledge of Rigmor Texhammar, a consultant and director of the AO courses for nurses. An important feature of the manual is the quality of illustrations which make it a standard. By 1981, translations could be found in English, French, Spanish, and Italian. Not surprisingly, the manual was very popular.
